

POOL & SPA DISINFECTION

NO CHLORINE ♦ NO SALT ♦ NON-TOXIC

The Aquabrite System is a unique, non-chlorinated, fresh water, pool and spa disinfection system. It is simple, healthy, efficacious and environmentally friendly.

The system is manufactured by Aquamatics, a wholly owned, private Australian business. Aquamatics has 30 years experience and has some 10,000 to 12,000 pools that use the system both here and overseas.

Advantages of the Aquabrite System

- Non-toxic - no chlorine, no bromine, no acid, no salt.
- Ideal for asthmatics and those with sensitive skin. Non-irritating to the eyes.
- Water remains taste and odour free. Ideal for all pools and spas (especially indoor).
- Conserves water - backwash can be used to wash cars and water lawns and gardens.

Benefits of the Aquabrite System

Many years of laboratory and field tests has refined a unique system to a point that it:

- does not bleach towels and costumes;
- does not leave a residue or damage pool surround;
- does not damage sandstone and plants;
- does not cause corrosion; and
- does not oxidise pool paint.

The Aquabrite System – How it Works

The Aquabrite System operates as a two part system. A synergistic effect is created between:

- an ioniser that consists of an electronic control unit and copper and silver electrodes, which through electrolysis, emits copper and silver ions into the water; and
- an oxidising agent, called Aquabrite, that enhances the ionic purification process by activating the ions in the water to accelerate the elimination of the algae and bacteria in the pool or spa. Aquabrite is a unique blend of oxygen based oxidisers.

Nature's Most Effective Disinfectants

Copper is nature's most effective algacide! Silver is nature's most effective bactericide!

The ancient Greeks and Romans realised that water stored in silver and or copper pots were pure and free of algae. The American homesteaders kept water fresh by adding silver dollars to their barrels. Silver was and still is used in first aid dressing to act as an antiseptic.

The Aquabrite System has harnessed nature's most effective disinfectant to help disinfect pools and spas.
